

key & screen logger

2 main roles

gather information about the OS

create a hidden directory named Docs inside C:\Users\Public (for windows) or ~/ (for linux)

inside Docs create a directory named Images

keyboard monitoring

capture every key pressed by the victim

save those keys in a file named keys.txt
inside monitor directory

screen monitoring

take a screenshot every 10s and save it
inside Images directory

the last step

every 10min zip the Docs directory

send the zip file to a given email

reset Docs, Images, and keys.txt
